Picture: Tim Noack/Moment/Getty Images Before the internet, there were few things we could do on rainy days or when we were stuck at home. If we were lucky enough to have a sibling (or a babysitter who was engaging), we could play board games when we were bored. In short, board games are amazing in theory: everyone gets together and has fun playing a game... that is, until someone starts crying because they are losing or someone starts cheating because they are the older siblings and the younger sibling can't say anything. So while board games can have the side effect of big family fun, they can also lead to rivalries and arguments that span decades - but who counts? If your family had a game shelf (or a game room), you can probably recognize almost every family board game that was popular when you were a kid. But if your family was the serious gamer family (before gaming became electronic, of course), you can probably name every board game that was ever made. Let's see if you have what it takes to beat the rest. Take this quiz to find out if you can identify all these board games (but we warn you, some of these games are pretty obscure). Just as the name suggests, a profit margin is the money you make in your small business once you've shared the sale with all your costs. Small Business Trends got in touch with some experts in different industries who narrowed down what the numbers might look like for your business. Michael Philippou has a business blog on My Startup Friend. He narrowed down what a good profit margin would look like in a well-known small business start-up. I operate in the restaurant industry and can tell you that anything over 10% net margin is considered to be excellent. In reality, most restaurants probably make only 5%, he writes in an email. What is a good profit margin? He goes on to give advice on determining your profit margin, whether you are making your books yourself to turn the numbers over to a General rule A general rule of thumb approach or an industry-specific approach. Whatever you use I find most people make the mistake of of on Net Margins instead of Gross Margins, he writes. - It is much more important to focus on gross margins, because that is what flows into the rest of the accounts. Get it wrong and you'll always have a bad net margin. NYU has put together some other data that includes good profit margins numbers in small business industries such as computer services (25.42%), healthcare products (57.45%) and online retail at 43.76%. Some of the small businesses that you would expect to do well as a unique gift shop understand the importance of specialization. For example, Karla Singson owns one of these stores in the Philippines.Good MarginsMy business has really good margins (50-70%) because it is a special service, she writes in an email. We supply flowers, teddy bears and chocolates and we can turn a huge profit on it due to the delivery/surprise factor. She goes on to stress the importance of providing a good shipping service. Some online small businesses have seen their profit margins challenged by the need to compete with the larger box stores that could offer the service for free. Singson says understanding her target audience has allowed her to bypass this common problem. I know what our customers are buying, plus we add the convenience of easy booking and same day delivery so they are willing to pay what we charge them. I think the secret is really to find out what people are paying for instead of what you think you can sell them. To date we also offer the décor of venues for surprises and suggestions, engagement rings and serenades! Break DownThere are some other encouraging profit numbers when you break down the retail industry. For example, retailers operating from the grocery store have a profit margin of 22.21 percent. The figures are even better for other small business growth industries. For example, there is a 66.93% profit margin for Internet software companies from January 2018, when some of these NYU numbers were compiled. Although there are major players in the field like Cisco and Microsoft, smaller app developers are constantly jumping up to get involved with industries that have these levels of profit. Conventional BoxDave Hermansen responded again with an experienced approach to profit margin that is outside the conventional box. I've never worried about profit margins. What I'm concerned about is the amount of profit per sale. I'd much rather have a 10% profit margin on a product that sells for \$3,000 than a 90% profit margin on something that sells for \$50. I guarantee you that I will have far more money to advertise that 10% profit product than the 50% one and still have more money left in my pocket after paying for the ads!
